Breaking Language Barriers

Live translation plus grounded understanding, so no one gets left behind in a workshop run in a language they don't speak.

Silence is invisible across a language gap

- Online workshops run across languages every day.
- When facilitator and learner don't share one, the facilitator can't tell who's following.
- A lost learner usually stays quiet — by the time anyone notices, the moment to help has passed.

We're solving real-time understanding between facilitators and learners, across languages, in a live session.

0:40 – 1:15 · APPROACH

Capture → Translate → Understand — with citations

1:15 – 1:35 · LIVE DEMO

Facilitator dashboard

The goal comes from setup. Decision and blocker cards weren't typed by anyone — pulled live from the transcript, each linked to the exact line it came from.

1:35 – 2:25 · LIVE DEMO

Join as a learner, get a translated reply

Scan a QR code, no account setup. Captions translated live, original still visible. Learner questions land on the facilitator's side already translated — replies auto-translate back.

2:25 – 3:05 · LIVE DEMO

Quiet-learner nudges & code-aware translation

When a learner goes quiet too long, the facilitator gets nudged — and the learner gets a gentle prompt too. And translation never mangles code: `validateEmail()` and `req.body.email` pass through untouched.

Live demo · quiet-participant detection

Catch-up summary for late joiners

A learner joining late doesn't scroll a wall of transcript — they get a grounded catch-up summary instead, citing the same transcript lines the dashboard cards do.

Grounded by design, real today

Impact

A learner going quiet in a language the facilitator doesn't speak used to be invisible — now it's a card on the dashboard.

Prototype quality

Real Postgres-backed sessions with role-scoped, opaque learner join tokens — not a slide.

Innovation & feasibility

`validateInsightDraft` rejects any AI insight citing outside its own transcript batch. Deepgram, DeepL, and Claude are shipping APIs we can call today.

Breaking Language Barriers — live translation plus grounded understanding, so no one gets left behind in their own workshop.
